TECHNICAL SALES BULLETIN

Accupart now offering a Cat air compressor conversion kit.

If you are experiencing oil passing with your 270-365 air compressor on Cat engine it is most likely due to the air intake plumbing configuration. Most compressors today use positive pressure on the intake of the compressor, and in the 2006, 2007 time frame Cat changed the plumbing to natural asperation, or negative pressure. This change resulted in increased oil passing into the trucks air system on many vehicles.

Accupart is now offering a solution to this issue by way of a conversion kit that allow you to change the compressor intake to positive pressure by utilizing the engine turbo air feeding the engine intake. Some rebuilders today are making it a mandatory change as part of the warranty offer on the air compressor. Order your kits today and stop your customers compressor from pumping oil permanently.

MIDC285-8823K ELBOW CONVERSION KIT, CAT N270/EL365, C-15
